# Director's Viewfinder OIC-16

## The formats

The director's viewfinder OIC-16 (Optical Image Control) is an indispensable device for every producer and DOP. It differs from conventional systems by having 7 integrated groundglass markings (patent applied). That means there is no need (any more) to exchange ground glasses. A part of the optical system is a wheel with 7 groundglass markings, most of them are combi-markings, which can be turned manually at the left side of the OIC-16. The OIC-16 is a precise instrument which was conceived for the rough use at a film set. The housing is of light alloy, hermetically sealed and fitted with a 54 PL mount to adapt lenses.

**1 : 1.37 N16**

**1 : 1.33 TV**

**1 : 1.33 N16**

The concept of the OIC-16 is based on "user friendliness". The ergonomic designed wooden handle lies in the hand phantastically and the fastening stirrup on the top allows to clamp it at any snap hook. The 1/4" thread in the housing, as well as the handle enables to mount the OIC to a tripod (e.g. one leg tripod) which is very handy when using longer ranges of focus. The eyepiece of the OIC-16 is turnable and therefore suitable for left and right eyed persons. For left handed users, there is a lefthanded handle available.

**Dimensions:** housing without lens: 150 x 85 x 100 mm (5.9 x 3.35 x 3.94 in)  
**Weight:** incl. handle without lens: 900 g (1.98 lb)
